

DB Systel UK Cloud Solutions

The drive to reduce costs whilst increasing the speed of innovation has led to a growing number of organisations adopting public cloud services. DB Systel UK have designed a range of cloud services to enable you to accelerate cloud adoption and gain maximum value from the cloud.

Public cloud services offer increased cost-efficiency, flexibility, scalability and availability, whilst operating a secure environment and without the need to commit to long term capital expense. Furthermore, the 'pay for what you consume' model means that you can provision resources to experiment quickly and discard cloud resources that are no longer adding value to your business without financial penalty.

DB Systel UK cloud services are designed to guide you through the stages of migrating to and operating in the cloud. Each package is designed to work together to provide a complete cloud adoption service. However, each package can be selected independently, and on a consultancy basis, to assist you to complete your journey to the cloud.

Cloud Total Cost Analysis

Whilst most cloud providers provide tools to allow you to estimate your cloud spend, these tools require you to provide

in-depth data about your current IT consumption. Our analysis service automates this process, and provides you with detailed and accurate costs of operating in the cloud, so you can be certain of the financial benefits before committing to a migration.

Cloud Architecture

Our experienced cloud architects work with you to understand your business requirements and create a cloud strategy and solution design that makes optimal use of cloud resources. Cloud adoption can be achieved in a number of ways, and DB Systel UK's six principle approach will ensure that your bespoke cloud architecture is right for your business.

Cloud Migration Services

The migration stage of your cloud journey is achieved using a selection of tools and processes designed to accelerate migration without compromising security and compliance, and without causing business disruption. Cloud services are configured and data migrated without impacting the availability of your IT services, and cut over to the cloud can then be planned at a time to suit your business.

Cloud Managed Services

DB Systel UK offer tiered managed service packages designed to either support you to manage your cloud technology, or provide a complete management solution covering all aspects of your cloud operation. To help you control your cloud spend DB Systel UK provide a cloud billing dashboard showing a near real-time view of your spending in the cloud, meaning you always stay in control.

About DB Systel UK
